

Integration Test Summary and Instructions

Test Summary

IntegrationTestCase:

Full Booking Process:

This script tests the full booking process in the system. It includes:

- Logging in as an existing user.
- Searching for flights.
- Viewing flight details.
- Submitting passenger information.
- Processing payment.
- Finalizing payment.
- Verifying the booking in the booking history.

Purpose: To ensure that the entire flight booking flow works seamlessly from start to finish.

IntegrationTestLoginAndSeatSelection:

This script focuses on:

- Logging in as a mock user.
- Viewing the user's booking history.
- Simulating seat selection for a flight.
- Logging out after the process.

Purpose: To verify login functionality, the ability to view booking history, and select seats, ensuring all operations are functional.

Integration Test Summary and Instructions

UserRegistrationAndSearchIntegrationTest:

This script tests:

- Registering a new user.
- Logging in as the new user.
- Searching for flights with specific criteria.
- Logging out after the search.

Purpose: To ensure user registration and flight search functionality works correctly.

Instructions for Running Integration Test Scripts

Prerequisites:

1. Ensure Python 3.7 or higher is installed.
2. Install the required dependencies using:

```
pip install flask pytest unittest supabase fpdf
```

3. Configure the .env file with the following variables:

```
SUPABASE_URL=your_supabase_url
```

```
SUPABASE_KEY=your_supabase_key
```

4. Ensure your Supabase database contains required tables:

- user_account
- flight_information
- seats
- bookinghistory

Running Tests:

1. Navigate to the project directory:

```
cd /path/to/project/Flight_booking
```

2. Run the tests:

- For unittest scripts:

```
python integration_test.py
```

- For pytest scripts:

Integration Test Summary and Instructions

`pytest integration_test.py`

3. Check the results in the terminal.

Common Issues:

- Missing dependencies: Reinstall with pip.
- Database connection issues: Verify .env settings.
- Port conflicts: Update the port in flightbook.py if needed.
